

# Promveg

## **ACTION:**

PROMVEG is a high concentration liquid formulation with fast agronomic effect of amino acids obtained by protein hydrolysis. PROMVEG increases the metabolic processes of amino acids production from Nitrogen, stimulates plant growth by providing faster synthesis of its own proteins, favoring vegetative overcoming from interruptions caused by "stress" environment, such as frost, root asphyxiation, prolonged period of drought and hail.

PROMVEG contains activators of plant metabolism which acts by increasing the resistance and germination of the pollen grain, as well the pollen tube length.

## **COMPOSITION % (w/w):**

Total Nitrogen(N)	2,0%
Organic Nitrogen (N)	2,0%
Free amino acids	12,0%

## **Aminogram:**

Glu (1.75%), Asp (0.18), Ala (1.13%), Arg(0.72), Gly (1.30%), Hys (0.24), Leu (1.25%), Ile (0.52%), Lys (0.46%), Met (0.45%), Phe (0.80%), Pro (1.10%), Ser (0.76%), Tre (0.58%), Tyr (0.20%), Val (0.56%)

## **APPLICATION PROCEDURE:**

### **Foliar application:**

Doses of 150 -250 ml per 100 liters of water.

Root application:

Drip irrigation: 5-10 liters per hectare distributed over fertilization plan.

### **CULTURES:**

It is recommended to apply in fruits, vegetables, citrus fruits, vines, olive trees, ornamental plants and turf.

Available packaging: 1L and 5L.

Registration number: 14/2016.

According to the Law-Decree N°103/2015 of 15 June.
